Product FAQ's

Is this a cleaner or a Polish?

This is a polish that is meant for polishing metal used after cleaning to restore its' natural shine.

How to use this product?

1. Shake can well before use.
2. Clean the silver article that you want to polish as usual.
3. Apply liberally with a soft absorbent cloth and rub thoroughly
4. Rinse water and let it stand for 2 to 5 minutes
5. Buff dry to high luster with soft cloth

Why does silver get tarnished / loses shine with time?

Due to the moisture and pollutants in the air the silver comes in contact with the oxygen and other chemicals such as sulphides from the air. These chemicals react with silver resulting in a blackish layer on the surface of the silverware.

Is this similar to other products available in the market ?

- Unlike other products available in the market, Scotchgard Silver Polish does not only polish but its unique formulation also protects against tarnish, thus giving a long lasting lustrous shine.
- This is made by special formulation that will not give pungent odor like Ammonia which irritates eyes and is safer on your hands too.

Can I use this product for silver utensils used for serving food?

Yes, you can polish your silver utensils using Scotchgard Silver Polish. Please follow usage instructions as prescribed on the pack.

Will this polish erode / abrade the metal?

3M internal studies indicate that product does not cause any erosion or abrasion of metal

Once bought, how many days will this product last?

If kept in a cool and dry place with cap closed, this product should last for over 24 months. Shake well before every use. If contents harden, add few drops of water.
